

Charging and Battery

 Place the battery in the expansion board battery holder, and use the USB cable to charge the battery.

 Do not use the battery while charging to prevent the charger or battery from exploding.

 When the voltage is around 3.7V, it needs to be charged in time. When the battery is fully charged, the battery voltage is about 4.2V.

 The battery should be taken out when the device is not used for a long time. Because even in the standby state, the battery will be worn out. The battery needs to be fully charged if you don't use it for a long time.

 When the battery is charging, the charger indicator lights up red and is full of bright blue lights. After charging is completed, the charger and power supply should be unplugged in time to avoid overcharging and damaging the battery.

Solemnly declare: Any economic loss and safety accident caused by failure to comply with the above-mentioned lithium-ion battery use specifications or operational errors shall be borne by the user.
